

Simply Smart

Our new formatting provides the Smart Phone viewer with unparalleled control, a view of the entire screen, and the site navigation menu. This technology requires minimum scrolling, and has exclusive features that take advantage of mobile phone advancements such as SMS (TXT Connect), click to call, and QR codes. The RTV mobile tour is interactive for those with touch screens, and allows users to scroll through the 360° panoramas and still images while enjoying an elegant fade from image to image. The technology has been enabled on both core products—the HD V-Slide and HD V-Tour—so all users on the RTV platform can enjoy these new developments.

This mobile exposure provides the perfect opportunity for our customers to start using QR Codes in their marketing packages. Because of the customization and flexibility of the RTV hit reporting system, users will be able to track the number of times virtual tours are accessed by the scanning of a QR Code.

This marketing tool will keep your virtual tours and v-slides looking their best and in front of more people than ever.

Minimum Scrolling

Studies show last year 91% of Americans own cell phones, with 61% owning a smart phone. 34% of American adults own a tablet and those numbers increase every month.

That means if you're still relying solely on newspaper ads and printed flyers, then you are behind the times!
